

FTX-S1XG-CxxL-12BD

XFP 10Gbps, CWDM, single-mode, 12dB

Description

FTX-S1XG-CxxL-12BD series XFP transceiver can be used to establish multiple, high speed serial data links over single-mode fiber. Thanks to adoption of CWDM technology it is possible to send up to 18 separate data streams over single strain of fiber***. At least 12dB optical power budget is guaranteed. Transceivers are fully compliant with XFP MSA specifications and are available in various hardware versions:

***eighteen pairs of CWDM modules and two pairs of optical multiplexer and demultiplexer devices will be required

Model(generic part number)	Operating case temperature
FTX-S1XG-CxxL-12BD	0~70°C
FTX-S1XG-CxxL-12BDI	-40~85°C

xx – indicates central wavelength, must be specified while ordering module, more info available in Ordering Information chapter

Host device can access module internal EEPROM memory and DDMI via I²C interface.

Built-in digital diagnostic interface (DOM, DDMI) allows a network administrator to monitor module parameters such as: transmitted and received optical power, temperature, supply voltage and laser current. Those information and data are very helpful e.g. in prediction and prevention of connection failures. A module is available in various dedicated versions, which can be compatible with devices from vendors such as Cisco, HP, Juniper, Extreme Networks, Alcatel-Lucent, 3Com, Linksys and more.
