

FIBRAIN 

PRODUCTS OVERVIEW

EAC

*solution for MDU application*

→ [www.fibrain.com](http://www.fibrain.com)

# Basic information

**Easy Access Cable System is a complete fiber optic solution for a multi-storey building using EAC cables.**

A special design gives the possibility to easy access cables by cutting a hole in the outer sheath without the need to connect at the branching point. This method permits removing a fiber optic module at the distance of 25m and, depending on the installation method, place a cable to the

customer outlet. The system is complemented by specifically designed tools, equipment and the possibility of ordering a pre-connectorized EAC cable, allowing easy and quick preparation of the whole network in a building.

## EAC system advantages

- Fast and flexible method of connecting users in multi-storey buildings
- Optimization of the workforce, cost and installation time
- Direct branching to subscribers without performing splices
- Flexible system that can be easily developed in the future
- Customization of cables and equipment to minimise the costs
- Support team from Design Department throughout the whole investment

# EAC system elements

# Internal connection possibilities – between an ONT and a customer outlet

# CPR classification

Ensuring fire safety in buildings is paramount, and one crucial aspect is the classification of cable fire performance as per the Construction Products Regulation (CPR). Under CPR, cables are categorized into several fire performance classes, each indicating their behavior in fire conditions.

Popular recommendations to use:

**NEW**  
B<sub>2CA</sub> & C<sub>CA</sub> CPR class cables  
now in FIBRAIN products portfolio

- CPR B<sub>2CA</sub>**
- Hospitals
  - Airports
  - Multi-storey buildings
  - Fire exits in public buildings
  - High density of people

- CPR C<sub>CA</sub>**
- Public buildings
  - Hotels
  - Schools
  - Office buildings
  - Medium density of people

- CPR D<sub>CA</sub>**
- Commercials buildings: restaurants, sports bars etc.
  - Residential (medium density)

- CPR E<sub>CA</sub>**
- Residential (low density)
  - General installations in some areas

- CPR F<sub>CA</sub>**
- Outdoor applications

# EAC vertical cables

They guarantee easy fiber distribution and reduce the number of required connections. At the same time due to carefully selected materials provide necessary fire-fighting safety.

Fiber extraction up to 25 m

ESM

CPR

LSOH

Up to 144 fibers

**EAC-RAS 2-24F**

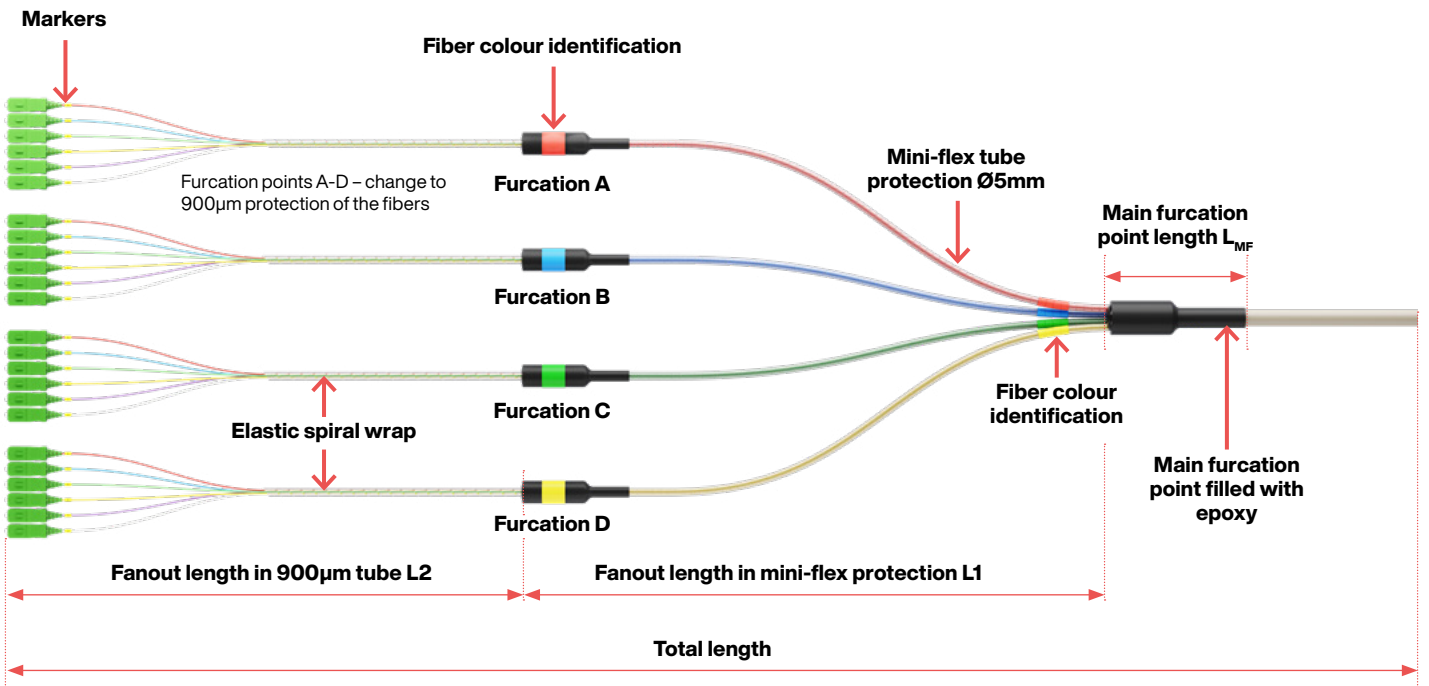

**EAC-RAM 2-144F**

## Possibility of fiber extraction

# EAC pre-connectorized cables

# Duct cables

Cables with single and multitube construction with higher optical fibers capacity, which connect distribution point in a building with a core network. Due to the use of LSOH sheath and CPR class, they meet all the necessary indoor cables requirement.

ESM

CPR

LSOH

Up to 288 fibers

**BDC-MSA LSOH**

## Pre-connectorized duct cables

Available in TCF or TEF series. Fully customized.

# Drop cables

FIBRAIN drop cables due to their design, including high mechanical strength, flexibility and reduced memory effect ensure quick and simple installation in FTTH networks.

ESM

Resibend Plus

CPR

LSOH

Up to 4 fibers

## VC-Dxx 1F

- VC-D30 3.0 mm
- VC-D40 4.0 mm

## VC-Dxx 2F

- VC-D40 4.0 mm

## VC-Dxx ESM 2F

- VC-D21 2.15 mm
- VC-D21C 2.15 mm
- VC-D30 3.0 mm
- VC-D40 4.0 mm

## VC-Dxx ESM 4F

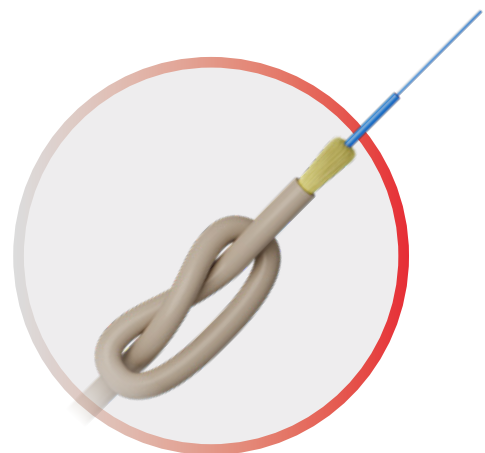

- VC-D21 2.15 mm
- VC-D21C 2.15 mm
- VC-D30 3.0 mm
- VC-D40 4.0 mm

## VC-DCY 1-4F

## Resibend Plus

Cables with Resibend Plus fibers fit perfectly into FTTH application needs. Due to the minimization of bending losses, they can be installed directly around corners in apartments and offices, compact cabinets and customer outlets.

# Patch cords

Patch cords and pigtails are used to connect subscribers of FTTH networks and connections between a customer outlet and ONT equipment. These patch cords are based on cables with reinforced construction, thus they are resistant to mechanical damages, comparing to standard patch cords. Therefore, each cable is constructed from slow-burning materials that don't emit any poisonous floodlight and LSOH smoke. Available in various constructions (PA0-PA4 series).

LSOH

Resibend

Resistance to mechanical damage

Diameter range 2.0-4.0 mm

## PAx family series

Direct cable termination (one connector) or with small fanouts (up to 4 connectors) with different diameters of the protection tube – PA1 Ø0.9mm, PA2 Ø2.0mm, PA3 Ø3.0mm. PA4 type – version with armored fanouts. Available as a coil or on a cardboard drum. Patch cords can be prepared for installation with additional protection with a pulling sock.

PA0

PA1-PA3

PA4

Additional pulling sock

RP-PAx – for fast and easy installation without the cable getting tangled

## I-Drop patch cords

I-Drop system allows fast, easy, virtually invisible fiber deployment in dwelling or businesses between the ONT and a customer outlet.

Invisible I-Drop cable with simplex construction and diameter Ø900µm

One-side or two-side termination

SC/LC/E2000 connector available

Single-mode fiber – G657A1/G657A2/G657B3

Available as a coil that is wound on a cardboard drum or as a ready set with PTO box (Customer outlet section, page 17).

## Easily Pullable Pre-connectorized cable EPP

An ideal solution when pulling a subscriber cable from the staircase to the apartment through a wall feedthrough. The FIBRAIN's EPP is based on a ready-made pre-connectorized cable kit with a special ending for direct pulling operation. Available with LCA and SCA connector type.

### EPP variants

SC APC Pullable pigtail & patch cord

LC APC Pullable pigtail & patch cord

Also available on a cardboard drum

# Distribution cabinets

Distribution cabinets are specifically designed as a distribution point inside a building for optical fibers installed with the use of EAC and FTTH systems. Preconnectorized connections and fiber splicing can be performed inside.

**Wall mounting**

**Up to 48 SC adapters**

**Lock secured**

**Metal housing**

**IFDT-B0**

**IFDT-F0**

**IFDT-G0**

**NSR-L**

**NSR-XL**

# Distribution boxes

Distribution boxes provide in-line cable installation and fiber branching in various directions. Fiber optic transmission to end users is guaranteed by a spliced connection, patch cord or an optical fiber extracted from the EAC cable.

Adapter panel

Quick installation

In-line cable installation

Light plastic housing

**BU-XN**

**NSR-S**

**NSR-M**

## FIBRAIN BU-XN

One product – many possibilities.

# Customer outlets

Compact housing is specifically designed for terminating optical line with max. 4 fibers inside a house and business applications. It is also available as a customer outlet with preconnectorized cable coil.

Wall mounting

Pre-connectorized option

2/4 x SC adapter

## Customer outlets

**VFTO-E1**  
2xSC customer outlet

**VFTO-F1**  
4xSC customer outlet

## Customer outlet with pre-terminated drop cable in coil

**VFTO-E1 / F1**  
customer outlets  
Cable types: VC-D21/D30/D40

**VFTO-E1**   
i-drop customer outlet

# Customer outlets

**NEW**

## VFTO-R1

Customer outlet integrated with up to 40m pre-connectorized 900µm LSOH cable

unwind the fiber optic cable from internal spool to the desired length

# RapidBox

**Customer outlet with factory terminated drop cable**

- VFTO-E1 - 2xSC/LCdx
- VFTO-F1 - 4xSC/LCdx

**Rapid box solution with a smart holder and few mounting option for easy unwinding**

**Capacity**

- 70m cable with Ø4.0mm
- 130m cable with Ø3.0mm
- 300m cable with Ø2.0mm

**Pre-connectorized drop cable 1-4FO**

**ARB-E1**

**ARB-F1**

**VFTO-E1 I-Drop Rapid box**

# Cable reserve boxes

Cable reserve box is specifically designed as a middle and final point of EAC system.

**Easy access to the cables**

**Lock secured**

**Max. cable capacity 80 m**

**SZB-A-40**

**SZB-A-60**

**SZB-EAC**

# Optical splitters

FIBRAIN FPLC splitters are used to split the optical power transmitted in the fiber optic line. FIBRAIN FLPC and GOLD splitters have unique APT® technology eliminating undesirable signal reflection from disconnected splitter's outputs.

**APT® technology**

**1x2N / 1x3N / 2x2N**

**Stable temperature**

**Up to 256 output ports**

**Alubox splitter**

**Blackbox splitter**

# HALNy Networks GPON/XGS-PON terminals and Ethernet routers

Interoperable FTTH/PON subscriber terminals and Ethernet routers with a wireless access point support MESH networks, Dual Band WiFi6.

High Availability Local Networks

Wall mounting

Pre-connectorized option

2/4 x SC adapter

IPTV support

Up to 10Gb/s

DESIGNED AND DEVELOPED IN POLAND

- Customized CPEs and ONTs (hardware and software)
- Interoperable ONTs with adaptive OMCI stack
- Proven interoperability with over 11 OLT vendors
- Universal provisioning methods (XML / TR-069 / DHCP / OTT / API) same for ONTs and CPEs
- EtherWAN support (change mode between PON and Ethernet) to simplify migration to GPON
- 2.5 Gigabit Ethernet LAN port

### SUPPORT

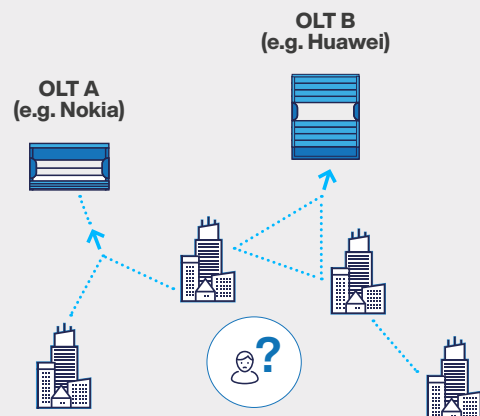

- Free of charge
- New firmware versions free of charge (no licence needed)
- Knowledge base
- Helpdesk system

## 1 Extend WIFI network with HALNy EasyMESH

## 2 Interoperable GPON ONTs

# HALNy Networks

## HALNy customized housing

### Features

- Possibility to use LAN4 port as an Ethernet WAN port, like a normal Ethernet router
- The only thing to use this mode is to switch the transfer mode button on the device
- Same housing for new generation GPON / XGS-PON ONTs and CPE
- All functionality like VLAN, VOIP and others remain
- Based on one-touch provisioning. You can easily migrate from your actual technology (for example DOCSIS) to GPON, without visits to the subscriber

Top cover housing available in additional colors

## HALNY customized software

- HALNy WEB interface with ISP logo and colours
- WIFI Prefix with ISP name
- Possibility to customize device with ISP default settings (like ACS, WAN, VLANs etc.)
- Device ready OUT-OF-THE-BOX to install
- Possibility to provision customization by ISP

# Tools and accessories

Set of tools necessary for EAC system.

**EAC-TLS-RT-A0**

FIBRAIN EAC cable window tool
